

Jurisdiction-level Vulnerability Assessment
Project
Emergency Response:
Public Health Crisis Response-
2018 Opioid Overdose Crisis Cooperative
Agreement

Final Report and Data Maps

Somerset County, New Jersey

August 7, 2019

Project Overview

The Centers for Disease Control and Prevention (CDC) provided funding to states that are affected by the opioid epidemic. The rationale of the public health crisis finding is to advance the understanding of the opioid overdose epidemic and scale up prevention activities across all 50 states and Washington DC.

The United States is in the midst of an opioid overdose epidemic. On average, 115 Americans die every day from an opioid overdose, and more than 630,000 people have died from a drug overdose from 1999 to 2016. In 2016, the number of overdose deaths involving opioids (including prescription opioids and illegal opioids like heroin and illicitly manufactured fentanyl) was five times higher than in 1999. Hepatitis C, a bloodborne pathogen, has high rates of transmission among persons who inject drugs.

The funding covers different domains that include Strengthen Incident Management for Early Crisis Response, Strengthen Jurisdictional Recovery, Strengthen Biosurveillance and Strengthen Information Management.

The New Jersey Department of Health (NJDOH) submitted various proposals that spanned domains. NJDOH's Public Health Infrastructure, Laboratories, and Emergency Preparedness (PHILEP) coordinated the cooperative agreement application for the department. The CDC approved funding for a project between the NJDOH Communicable Disease Service and the New Jersey Association of County and City Health Officials (NJACCHO).

The Opioid and Bloodborne Pathogen Transmission Vulnerability Assessment Project was funded in Domain 2: Strengthen Jurisdictional Recovery. This project is a collaborative effort between the NJDOH and NJACCHO. The initial goal of the project was to conduct vulnerability assessments to identify resources in 14 counties to identify areas at high risk for opioid overdoses and bloodborne pathogens (BBP) associated with non-sterile injection drug use. The 14 counties were selected because of the prevalence of hepatitis C per populations and those counties identified as High Intensity Drug Trafficking Areas (HIDTA). HIDTA counties are included in the project, as injection drug use has been linked to the opioid epidemic. NJACCHO modified the initial goal to expand data collection to all 21 counties.

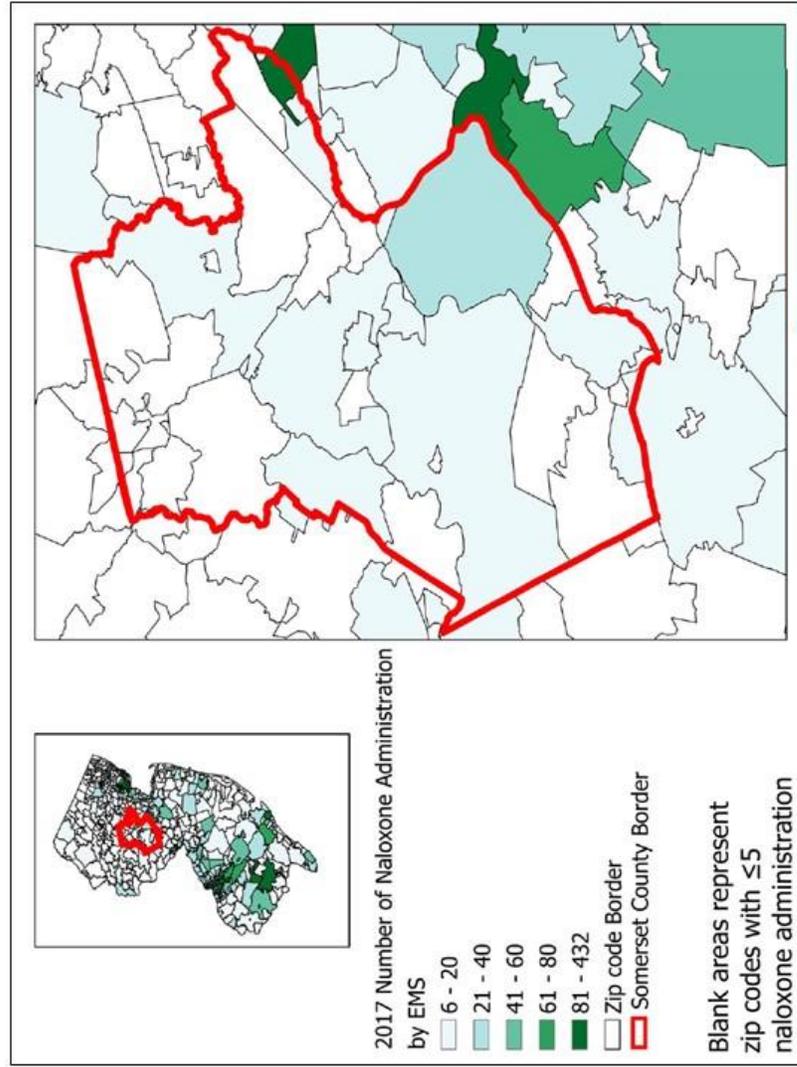

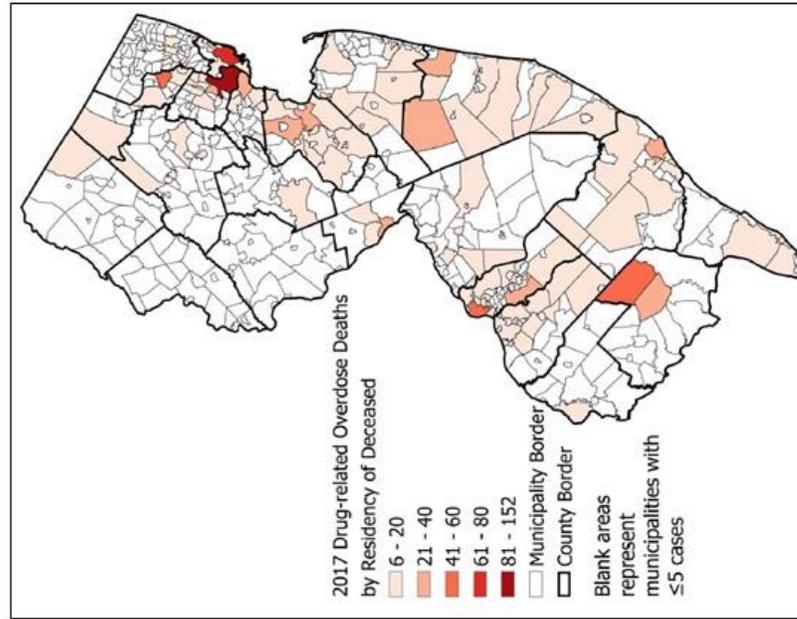

In addition to the vulnerability assessments, NJACCHO worked with stakeholders and partners to develop plans that identifies and allocates prevention and intervention services for opioid and prevention of BBPs. NJACCHO expanded the initial goal of assessing 14 counties to all 21. At the conclusion of the project, the expanded efforts lead to 18 county meetings with stakeholders and partners, and 18 fully complete vulnerability assessments.

NJACCHO in collaboration with NJDOH collected the following data indicators for 2017 at the municipality level, broken into risk factor, harm reduction and social determinants of health categories:

Risk Factors	Harm Reduction	Social Determinants of Health
Overdose Deaths	Syringe Access Locations	Living Below the Poverty Level
Naloxone Administrations (EMS)	Bloodborne Pathogen Testing Sites	Unemployment Rates
Hepatitis C Rates	Municipal Alliances	
HIV/AIDS Rates	Rx Drop Box Locations	
Drug Related Arrests	Licensed Opioid Treatment Programs	
	Medication-Assisted Treatment (MAT) Locations	
	Drug Detox Locations	
	Sober Living Houses	

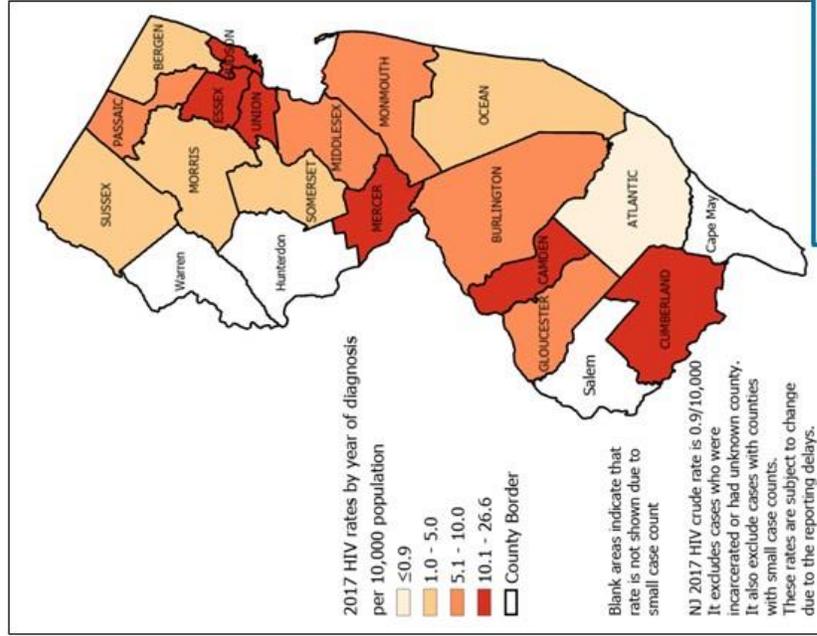

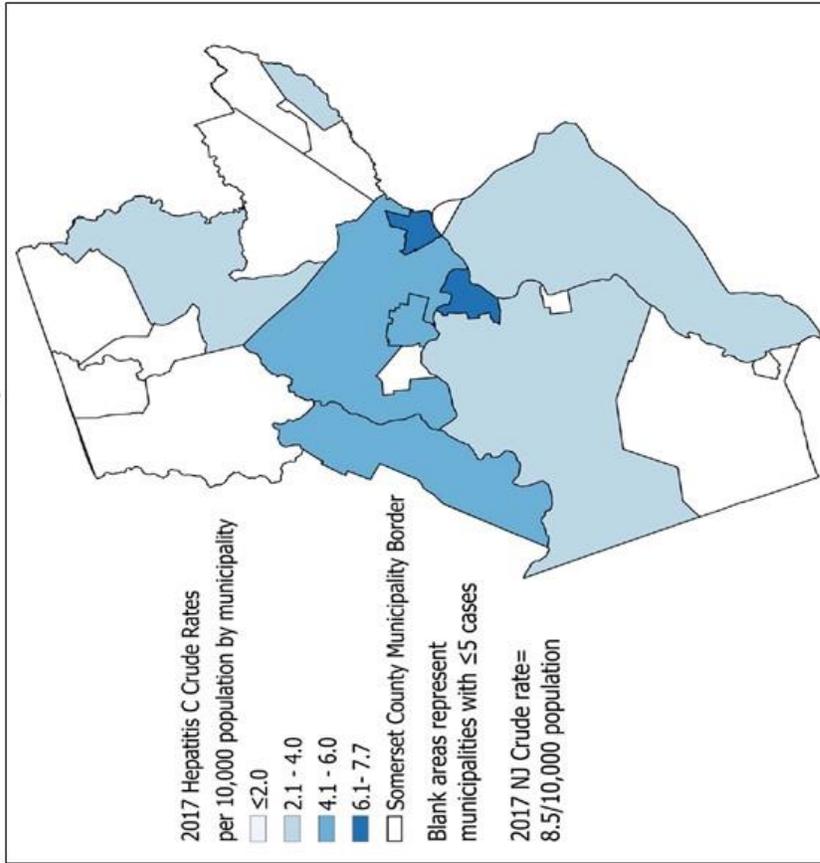

The remainder of this report will provide the Geographic Information System (GIS) mapping of the indicators above, at the municipality level. These GIS maps serve as a visual representation of the locations of prevention and intervention services and resources and will assist with identifying which services and resources are needed in the county to fight the opioid epidemic.

Somerset County Known Risk Factors

Data source: Drug-related overdose deaths data were obtained from Center for Health Statistics and Informatics of NJDOH and Naloxone Administration data were obtained from NJDOH EMS
 Maps Created 7/15/2019

Somerset County Hepatitis C and HIV Rates

Data Source: Hepatitis C data were obtained from Communicable Disease Reporting and Surveillance System
HIV/AIDS data were obtained from <https://www.nj.gov/health/hivstadb/>

Somerset County Harm Reduction and Prevention Services

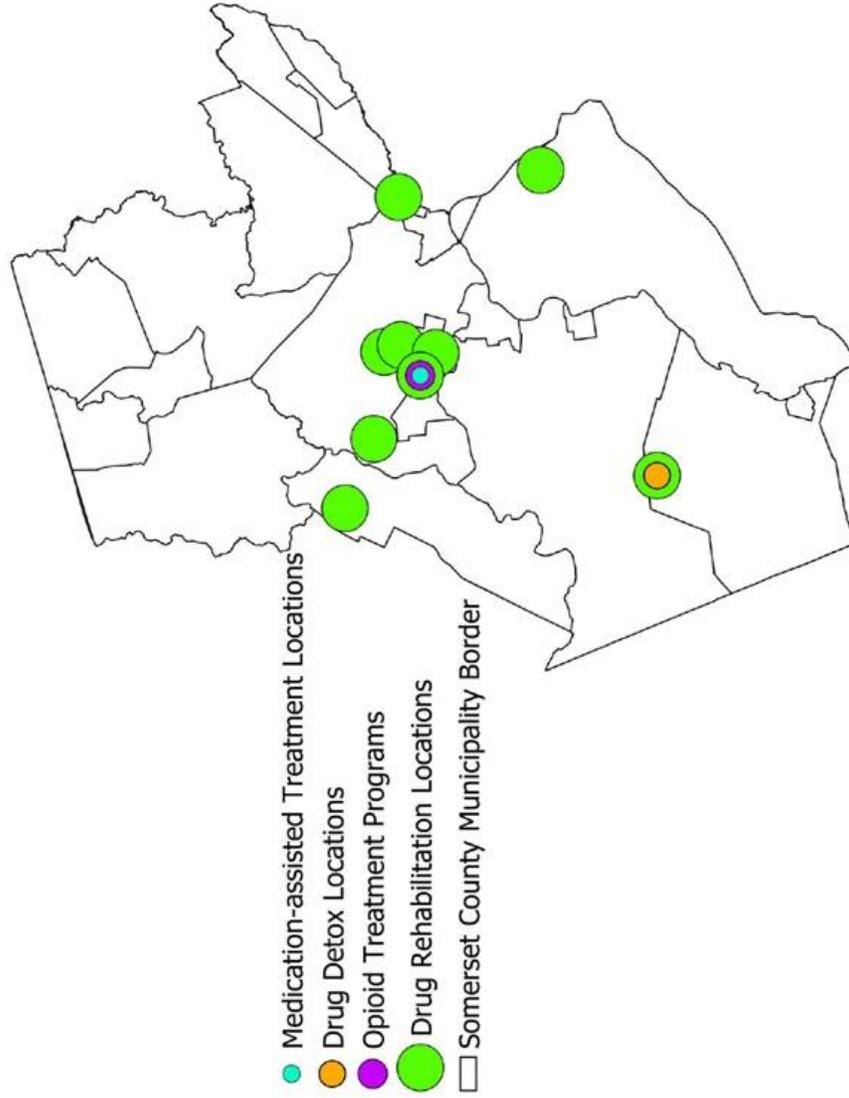

Data Source

1. Syringe Access Locations from <https://www.nj.gov/health/hivstadb/sap.shtml>
2. Bloodborne Pathogens Testing Sites
 - a. ARCH Nurses from https://www.nj.gov/health/cd/documents/hepatitis_resource_guide.pdf
 - b. NJDOH Hepatitis B & Hepatitis C Testing and Treatment in NJ from https://www.nj.gov/health/cd/documents/hepatitis_resource_guide.pdf
 - c. Ryan White Testing Sites from <https://www.nj.gov/health/hivstadb/hiv-aids/getting-tested/>
 - d. Federally Qualified Health Centers from <https://web.doh.state.nj.us/apps2/his/cph/cphSearch.aspx>
 - e. NJDOH HIV Testing sites from https://www.nj.gov/health/hivstadb/documents/all_counties_clinic_sites.pdf
4. Municipal Alliances from <https://gada.nj.gov/alliance/>
5. Rx Drop Box Locations from <https://www.njconsumeraffairs.gov/mddrop/Pages/Locations.aspx>

Somerset County Treatment Services

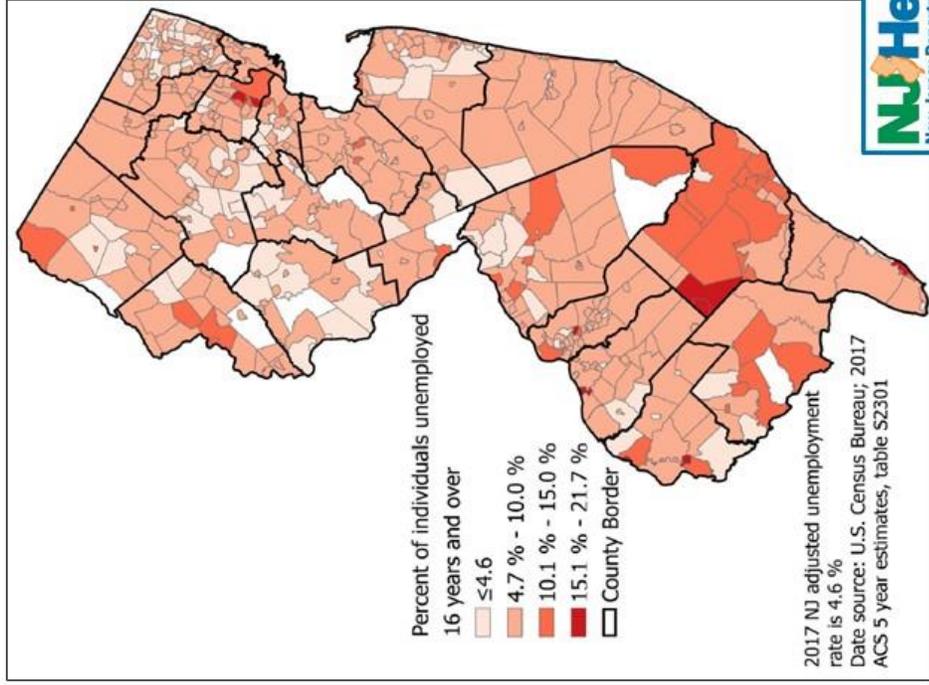

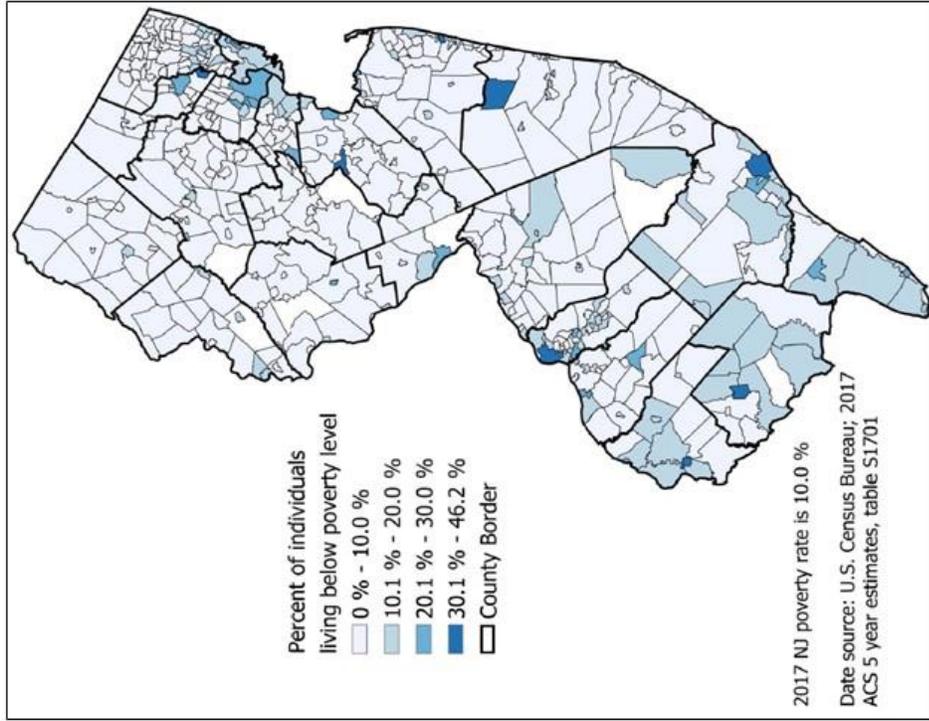

Data Source

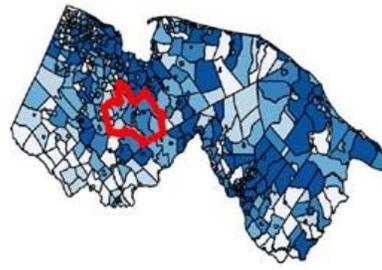

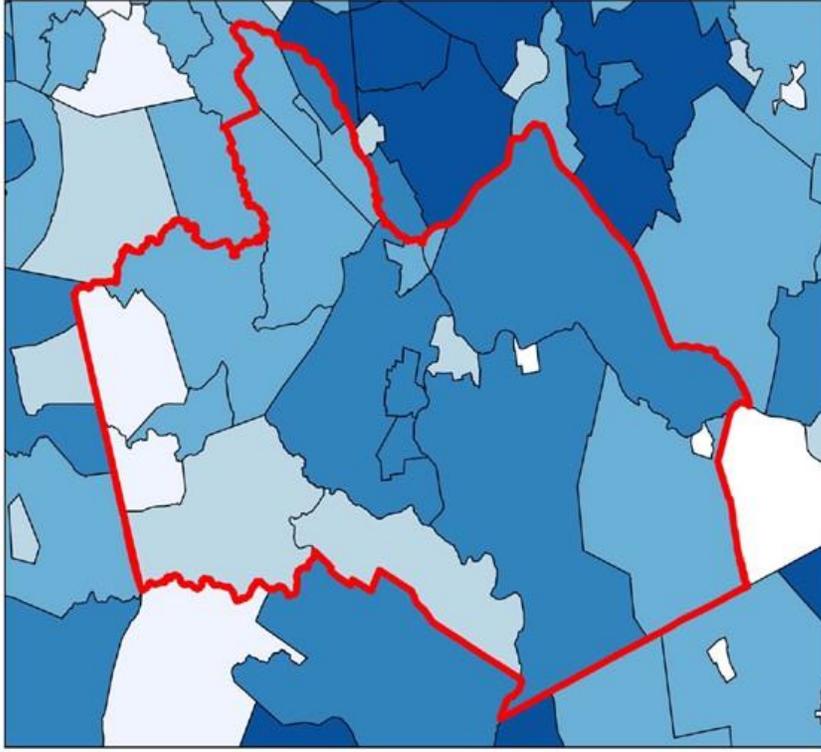

1. Drug Detox Locations from <https://njisams.rutgers.edu/dasbdirectory/bdirmain.htm>
2. Medication-assisted Treatment Locations from <https://njisams.rutgers.edu/dasbdirectory/bdirmain.htm>
3. Sober Living Houses from <https://njisams.rutgers.edu/dasbdirectory/bdirmain.htm>
4. Drug Rehabilitation Locations from <https://njisams.rutgers.edu/dasbdirectory/bdirmain.htm>
5. Opioid Treatment Programs from <https://dprcsamhsa.gov/treatment/>

Below Poverty Level and Unemployment Rates

Somerset County Drug Arrests by Municipality

- Number of Drug Arrests
- 0 - 17
 - 18 - 42
 - 43 - 84
 - 85 - 174
 - 175 - 3922
- Municipality Border
□ Somerset County Border

Somerset County Plan

Challenges:

1. Funding sources dictate scope of work and decrease ability for successful cross sector partnership, thus resulting in duplication of services and programming.
2. Difficulty collecting or accessing local, community level data. Existing data is only available on a County wide level.
3. Limited County and State level integration, leading to a lack of understanding of roles across all stakeholder sectors.
4. Stigma and misinformation feeding professional and community level perceptions regarding addiction, screening, treatment and long-term recovery.
5. Limited priority placed on risk of blood borne pathogens (BBP) transmission in injection drug use population.

Opportunities & Future Actions:

1. Capitalize on and expand current cross sector work to define specific roles in prevention, screening, response, treatment and long-term recovery for injection drug users at risk for BBP. This work can increase impact by reducing siloed work and duplication of services. Specific sectors to consider include:
 - a. Medical Community, Primary Care Practitioners and other Prescribers
 - b. Public Health Departments
 - c. Prevention Organizations
 - d. Treatment Facilities
 - e. Recovery Specialists
 - f. Law-Enforcement and other First Responders
 - g. Community
 - h. Parents and Families
2. Identify missing partners or sectors and work to engage their participation in the response and messaging.
3. Provide educational opportunities for groups and partners outlined in #1. Specific items can include:
 - a. BBP transmission, screening, prevention and treatment
 - b. Prescription drug use and addiction
 - c. Process of addiction and recovery
 - d. All treatment options

4. Utilize existing information sharing platforms and networks from partnerships to increase awareness of risk factors for injection drug use and BBP transmission. Provide education on vaccination and other prevention opportunities, screening and treatment of substance abuse disorder and BBP.
5. Assess effectiveness of current programs, services and treatment being offered to injection drug users. Explore other promising practices and best practices within the field to ensure effective models and strategies for BBP screening, vaccination and education are being utilized.
6. Evaluate the Overdose Fatality Review Team model and create a team within the County to steer future work and promote additional cross sector partnership.
7. Evaluate current Harm Reduction Centers in New Jersey Counties and provide information and education on purpose, safety and community impact to law and policy makers.
8. Evaluate the need and capacity for improving community support, services and education based upon the attached maps through continuous multi-sector meetings.
